Southern St. Clair County Water Levels

A conference call was held at 9:00 a.m. this morning with local governmental officials, the Emergency Operation Center and the Army Corp of Engineers to receive an update on water levels in Lake Huron and the St. Clair River. At this time, it appears we have potentially reached peak water levels for the summer. Higher water levels may arise should additional rainwater or heavy wind impact local waterways.

At this time, no additional major flooding expected, however the threat exists in low lying areas. Residents should continue to take steps to protect property from water damage resulting from wind driven high water or boating wakes.

Boaters are strongly encouraged to reduce wakes as much as possible to prevent property damage. No wake zone maps can be downloaded at: <http://www.bluewaysofstclair.org/nowakezone.asp>.

The following locations are providing sandbags to their residents:

- Clay Township Water Department on Muskrat Run between 7:00 a.m. and 3:30 p.m.
- Ira Township Office 7085 Meldrum Rd. Monday through Thursday 7:00 a.m. and 5:00 p.m.
- Algonac DPW by calling (810) 794-9361
- East China Township located west of the waste water treatment plant at 1244 Recor Road
